

Completed in 2015, the main Gothic Arch on this church used Fast Track and 313 sq ft of cast stone soffit panels from RockCast. Five different panel sizes were used with each panel sitting at 1.5" thick. Constructed on 107 acres of a former horse farm, the new campus facility includes a main worship center that seats 850, 50 classrooms and multi-use spaces for ministry and community outreach. In addition to the various high-end finishes throughout the building, gothic architect curtain wall systems were installed on the building to reflect mimic the churches' original historic sanctuary, Circa 1872.
